

Battlefield Tactics: Defend Flowering Eradicate Insurgents

Protector^{hml} and HML 32:
armour plate for grapes

Bracket flowering with HML 32 for powdery mildew and botrytis control

The timing of these sprays has powdery mildew as the target and collects botrytis efficacy as a consequence.

HML 32 alone deals direct to botrytis, but the addition of sulphur and copper deals a blow to microscopic powdery mildew both preventively and eradically. Powdery mildew is a major pre-cursor disease to the onset of botrytis.

**Just before
inflorescences open**

HML 32 + sulphur + copper.

**Inflorescences open
to 80% capfall**

Give nature a chance to deliver the best yield or, if desired, use another botrytis product at this growth stage.

80-100% capfall
HML 32 + sulphur + copper.
